Bungie: Destiny Dev Team

Subclassses

In an effort to keep them engaged with their new bodies and stave off the dissociative rejection that killed Mr. Zhuk, I have assigned my exos to scout through the gateway. The Vex statite has a surface area larger than Earth, so we have plenty of exploring to do. I cannot believe that I actually find it tiring, but the sheer scale and passivity of the Vex constructs infuriates me. Until I can synthesize my own version of the mind fluid, the Vex are necessary to the work. But I find their indifference verminous. They elicit the same emotions as a fat cockroach wandering across a wall: disgust, contempt, unease at the thought that these mere machines, these automata, are flourishing all around us. Imagine stumbling upon an inscription in the desert: "I am Ozymandias, king of kings. Look upon my works. Or don't. I really don't care. And I fear that if troubled, they might swarm from their hides to run across our feet. The glare of the hypergiant 2082 Volantis gives me a headache even through proxy. I wonder if the Vex evolved here, in the briny sea of the first planets. Due to the absence of heavy elements worth stealing and the abundance of simple compounds for growth, they never developed predation. (Why bother? Plenty to go around.) Look upon my works. Or don't. I really don't care. And I fear that if troubled, they might swarm from their hides to run across our feet. I wonder if the Vex evolved here, in the briny sea of the first planets. Due to the absence of heavy elements worth stealing and the abundance of sim. And I fear that if troubled, they might swarm from their hides to run across our feet.
